In the event the County of Will receives a request for a document relating to contractor, its provision of services, or the arranging for the provision of services, the County of Will shall provide notice to contractor as soon as practicable and, within the period available under FOIA, contractor may then identify those records, or portions thereof, that it in good faith believes to be exempt from production and the justification for such exemption. Regardless, contractor will be responsible for any costs or damages associated with defending the request for exempt treatment. Furthermore, contractor will warrant that County of Will's responses to requests for a document relating to contractor, its provision of services, or the arranging for the provision of services, will not violate the rights of any third party.

Please be advised also that FOIA provides that any record in the possession of a party with whom the County of Will has contracted to perform a governmental function on behalf of the County of Will, and that directly relates to the governmental function and is not otherwise exempt under FOIA is considered a public record of the County of Will for purposes of FOIA. 5 ILCS 140/7(2). As such, upon request by the County of Will (or any of its officers, agents, employees or officials), the contractor shall provide to the County of Will at no cost and within the timeframes of FOIA a copy of any "public record" as required by FOIA and in compliance with the provisions of FOIA. After request by the County of Will, contractor may then identify those records, or portions thereof, that it in good faith believes to be exempt from production and the justification for such exemption. Regardless, contractor will be responsible for any costs or damages associated with defending the request for exempt treatment.

Jennifer Bertino-Tarrant  
County Executive

The County of Will GIS Division (County) is posting an invitation to bid related to our LiDAR collection previously completed in the spring of 2021. The LiDAR collection met QL1 standards. The County is looking for a qualified vendor to submit bids for the following LiDAR byproducts: classification of building and vegetation, 2D tree canopy polygons, intensity imagery, detailed hydro break lines, culvert inventory, hydro enforced Digital Elevation Model (DEM), closed depressions, and soil erosion potential areas.

Preference will be given to firms experienced in production and processing of LiDAR data with adherence to current USGS base specification. Data produced shall adhere to ASPRS positional accuracy standards for digital geospatial data published in 2014.

**Classification of building and vegetation:** The USGS Lidar Base Specification does not require classification for buildings or vegetation. With the quality of our 2021 LiDAR, the County is requesting the selected vendor to classify buildings and vegetative areas. A vendor will first process the LiDAR returns for buildings. Once the buildings are classified, a vendor will then process the LiDAR returns for vegetation. Vegetation points that are 10 feet or higher above ground will be classified. Building points will be put in Class 6 and Vegetation points will be put in Class 5.

**2D Tree canopy polygons:** The County forest preserve district manages 67 preserves totaling 23,000 acres. Besides recreational areas, there are several municipalities with areas of mature trees. The County would like a vendor to capture these areas based on the vegetation classification above. Areas classified as Vegetation with nominal pulse spacing at or below 0.7 would be captured in a tree canopy polygon. The tree canopy deliverable will be a file geodatabase layer.**Intensity imagery:** Intensity imagery is a raster similar to an orthoimage created from the strength of the returns from LiDAR pulses. The strength values will show surface reflectivity. The resulting imagery will identify impervious surfaces and vegetation. The intensity image will be delivered in an Esri compatible image format.

**Detailed hydro break lines:** As part of this RFP, the County is requesting a vendor to produce several byproducts from our 2021 LiDAR collection. Break lines for creeks and rivers greater than or equal to 8 feet in width shall be captured as double lines, one line along each bank. Break lines shall be captured for all lakes and ponds in the project area greater than or equal to one (1) acre in size. The detailed hydro break lines will be delivered in a file geodatabase.

**Culvert inventory:** Will County is looking to improve upon our already existing culvert inventory. With our QL1 LiDAR collection in concert with our certified ortho capture and existing inventory, the County has an opportunity to build a complete culvert GIS layer. A vendor will be provided all products to develop a countywide culvert layer. The culvert deliverable will be a file geodatabase layer.

**Hydro enforced DEM:** The initial project proposal identified the DEM deliverable as hydro flattened. As part of this RFP, the County is requesting the development of a hydro enforced DEM. A vendor will utilize several other byproducts referenced above to produce a hydro enforced DEM. This DEM would be delivered in an Esri compatible image format.

**Closed depressions:** Identifying areas where the potential runoff is minimal will aid land owners to determine potential areas for flooding. A vendor will take the contours developed by our LiDAR vendor, and several other byproducts referenced above to develop a countywide, closed depressions layer. The closed depressions deliverable will be a file geodatabase layer.

**Soil erosion potential areas:** The County works closely with the Will County Farm Bureau to support their mission. A vendor will reference the 2021 Lidar contours, culverts referenced above, and other readily available GIS data layers to produce a countywide index for soil erosion potential. The deliverable will be an Esri compatible image format.
